ALIBI

TRACK 01: AGENTS THAT ACT ON CONNECTED DATA · OFFICIAL VIDEO SCRIPT

TRACK 01 · FALKORDB

⏱ Target: 5m 30s · Team Subaru Boys

The Track 01 Thesis: "The Graph Does Real Work"

Traditional LLMs hallucinate facts, flatter players, and forget spatial rules. In **Alibi**, the LLM *never* decides what is true or solves the murder. Suspects speak through an AI Firewall bound strictly to authored claims. Every statement, keycard swipe, and receipt dynamically builds a tenant knowledge graph in **FalkorDB**. Our autonomous AI Inspector agent executes graph traversal queries to expose contradictions, impossible moves, and rehearsed alibis.

⚙️ Recording Setup

- ✓ App running on `http://localhost:3001`
- ✓ FalkorDB Browser ready on `http://localhost:3000`
- ✓ Screen resolution set to 1080p (1920×1080)
- ✓ Clear audio; steady, enthusiastic pacing

🎯 Judge Evaluation Criteria

- ✓ Information Barrier: `truth:*` isolated from `play:*`
- ✓ Pocket Graph: Live interactive Cypher proofs
- ✓ Autonomous AI Inspector calling graph tools
- ✓ Sub-millisecond OpenCypher traversal demonstration

🎬 Scene 1: Introduction & The Core Thesis

`0:00 - 0:40 (40s)`

SCREEN Start on the **Home Page** (`http://localhost:3001`). Show hero title *"Every lie leaves a path."* Hover gently over Track 01 banner.

SPOKEN SCRIPT:

"Hi everyone, I'm presenting **Alibi**—a detective game built for Track 01: *Agents That Act on Connected Data*.

In traditional AI games, large language models hallucinate, lose spatial consistency, and invent whatever pleases the player. In **Alibi**, we flipped the script: **The LLM does NOT decide what is true, and it does NOT solve the mystery. FalkorDB does.**

Suspects speak through an AI firewall bound strictly to authored claims. Every statement, witness sighting, and physical exhibit dynamically constructs a connected knowledge graph in FalkorDB. Let's jump into **Case 0** to see how this works in real time."

Step 1 & 2: Inspect Dee & Interrogate for Alibi

0:40 - 1:05

ACTION Click **"Play Case 0 (Guided Walkthrough)"** on home page. Step 1 modal opens. Click **"Show Me Dee →"**. Click **Dee** in the left dossier.

SPOKEN SCRIPT:
"We begin with our interactive induction walkthrough. The modal explains that all suspect nodes start in a clean slate in FalkorDB.
A visual spotlight guides us to inspect our first suspect, Dee. In Step 2, we interrogate her. Every question writes a live (`:CLAIMED`) relationship into FalkorDB."

ACTION Click **"Guide Me to Question →"**. Click glowing lead button: **"Where were you at 8:20?"**.

SPOKEN SCRIPT:
"Dee claims she was in the Green Room at 8:20. Watch our docked Pocket Graph at the bottom—it immediately creates a connected edge to the Green Room!"

Step 3, 4 & 5: Scene Evidence, Pocket Graph & Accusation

1:05 - 1:35

ACTION Step 3 modal opens. Click **"Guide Me to Search Prop Store →"**. Click **Search** on Prop Store in left panel. Close Search modal.

SPOKEN SCRIPT:
"Physical evidence cannot lie. Ground truth exhibits write immutable (`:Anchor`) nodes. We search the murder scene: the Prop Store. The keycard reader log reveals three cards entered by 8:20."

ACTION Step 4 modal opens. Click **"Inspect Pocket Graph →"**. Point cursor to red contradiction ray and green clearance shield!

SPOKEN SCRIPT:
"FalkorDB executed Query Q60 in real time! Look at the Pocket Graph below: a bright red contradiction line connects Dee's Green Room claim to the Prop Store keycard log. Meanwhile, Mr. Okoye in the Box Office gets a green clearance shield."

ACTION Click **"Accuse Dee →"** on bottom beacon. Step 5 opens. Click **"Take Me to Accuse →"**. Confirm accusation.

SPOKEN SCRIPT:
"We file the indictment and achieve a flawless conviction. That's the induction loop—now let's tackle the full mystery!"

The Case Briefing & Playhouse Cast

1:35 - 2:00

ACTION Click **"Start Case 1"** or open Case 1 from `/season/1`. Briefing modal opens automatically.

SPOKEN SCRIPT:

"Welcome to **Case 1: A Quiet Pact**. Walter, director of the Grand Playhouse, was bludgeoned to death in the Prop Store between 8:00 and 8:40.
We have 4 suspects: Dee, lead actress; Kofi, stage manager; Hana, costume designer; and Mr. Okoye, box-office manager."

Dee (Actress) · Kofi (Stage Mgr) · Hana (Costume) · Okoye (Box Office)

Interrogation & FalkorDB Q61 Rehearsed Alibi Detection

2:00 - 2:40

ACTION Close Briefing. Select Dee → click **"Where were you at 8:20?"**. Select Kofi → ask 8:20. Select Hana → ask 8:20.

SPOKEN SCRIPT:

"Let's interrogate Dee. She claims she was in the Green Room with Kofi and Hana, noting *'the interval bell rang twice. I remember counting.'*

Now let's question Kofi and Hana—they repeat the exact same curious phrase.

Behind the scenes, FalkorDB executes Query Q61—detecting an authored Rehearsed Alibi cluster between all three suspects!"

```
MATCH (s:Statement {kind: 'location'}) WHERE s.detail <> ''
WITH s.slot AS slot, s.room AS room, s.detail AS detail, collect(DISTINCT s.by) AS people
WHERE size(people) ⩾ 2 RETURN people, detail
```

Scene Evidence & Pocket Graph Cypher Inspector

2:40 – 3:15

ACTION Click **Search on Prop Store** (Door Log found). Click **Search on Box Office** (Till Receipts found). Close modal.

SPOKEN SCRIPT:
"Now we search for exhibits. The Prop Store door log proves Dee, Kofi, AND Hana entered the crime scene at 8:20. Meanwhile, the Box Office till receipts prove Mr. Okoye was at the cash register at 8:00 and 8:40."

ACTION Click **Dee** node on the docked Pocket Graph. Click **"Show Cypher Proof"** in the drawer.

SPOKEN SCRIPT:
"Look at our Pocket Graph! Dee, Kofi, and Hana are all wrapped in red contradiction rays. Mr. Okoye has a green clearance shield.
If we click Dee, the inspector displays plain-English deduction—and we can expand the Live FalkorDB Cypher Proof right in the client!"

Analytical Tabs, AI Inspector & Perfect Conviction

3:15 – 3:45

ACTION Click **Timeline Tab** → click **Board Tab** → click **Inspector Tab** → click **"Run Analysis"**.

SPOKEN SCRIPT:
"Let's explore the analytical tabs. The **Timeline Grid** plots statements against hard anchors. The **Evidence Board** renders an interactive XYFlow canvas connected with red yarn threads.
And the **AI Inspector** is our autonomous copilot. It doesn't hallucinate; it executes graph traversal tools over our live FalkorDB graph, automatically writing verified Flags and Hypotheses onto our board."

ACTION Click **Accuse** in header. Select **Dee, Kofi, and Hana**. Submit indictment. Show Verdict screen.

SPOKEN SCRIPT:
"Graph math proves Dee, Kofi, and Hana formed a conspiracy. We accuse all three and submit.
Perfect 3-star conviction! The verdict evaluates against the isolated truth graph, and the execution trace confirms zero information barrier leaks."

🎬 Scene 4: Season Scope & The Bait Mechanic

3:45 – 4:15 (30s)

ACTION Click **"Back to Season 1"** in header. Point cursor to Case 2 & Case 3.

SPOKEN SCRIPT:
"Season 1 includes two more elaborate cases: **Case 2: The Stopped Watch**, requiring multi-hop physical room traversal across estate topologies; and **Case 3: The Blackout Dinner**, where suspects hold silent pacts.
Here players use our Bait Mechanic—dropping discovered physical items into interrogation to pressure suspects into revealing new corroborating graph nodes."

🎬 Scene 5: FalkorDB Browser Deep Dive (The Secret Weapon) 4:15 – 5:30

SCREEN Switch tab to **FalkorDB Browser** at `http://localhost:3000`. Point cursor to left sidebar graph list.

SPOKEN SCRIPT:
"Now let's inspect the connected data structure in FalkorDB Browser. Notice our strict architectural Information Barrier:
`truth:l1-quiet-pact` stores the hidden ground truth that only search and verdicts can read.
`play:demo:l1-quiet-pact` is the player graph where statements and exhibits accumulate. Zero spoilers can ever leak."

1. Visual Schema Overview:

```
MATCH (n) RETURN n LIMIT 40
```

"Running a simple MATCH displays our live graph: (`:Person`) nodes connect via [`:CLAIMED`] to statements, and physical evidence forms (`:Anchor`) nodes linked to room topologies."

2. Core Contradiction Cypher (Q60):

```
MATCH (s:Statement)-[:AT_TIME]→(t), (a:Anchor)-[:AT_TIME]→(t)
WHERE s.subject = a.subject AND s.room <> a.room
RETURN s.by AS suspect, s.room AS claimed, a.room AS actual, t.slot AS slot
```

"Here is query **Q60**. In sub-millisecond execution, FalkorDB returns Dee, Kofi, and Hana claiming the Green Room while the keycard anchor proves they entered the Prop Store. Pure, deterministic graph math!"

3. Room Connectivity & Journey Feasibility:

```
MATCH path = (r1:Room {id: "box_office"})-[:CONNECTED_TO*1..3]-(r2:Room {id: "prop_store"})
RETURN path
```

"And here is our room topology path, proving Mr. Okoye in the Box Office was physically separated from the crime scene, giving him a mathematically verified alibi.

This is Alibi: bringing connected data, deterministic reasoning, and AI agents together on FalkorDB. Thank you!"
